## Problem Statement

Some of us face problems when seeking medical advice due to various reasons, the patient might not be in a suitable condition to visit a doctor. Added to that, some conditions do not necessarily require the patient to visit a doctor and it would be a waste of money and time if he did. Moreover, some countries do not have enough expertise in the medical field and rather prefer enduring the sickness instead of seeing an inexperienced doctor.

## Overview

Medical Hub will be a website that allows communication between patients and experienced doctors. Any patient can ask about the symptoms he has and will be answered by doctors who faced this disease before. This helps in spreading medical knowledge on a global scale.

## Goals

1. Makes it easier for patients - who cannot leave their house - to take a medical consultation from experienced doctors.
2. Some countries don't have good expertise in some diseases. So , people in this country can ask foreign doctors about their illness.
3. Some symptoms of the disease and their therapy are famous. So , we don't always need to go to doctors.

## Functionalities

1. Login system for patients.
2. Login system for doctors.
3. Rating system for the doctors.
4. Medical Questions by the patients.
5. Answers by the doctors.
6. Likes and dislikes by the users.
7. Search on previous questions.

## Milestones

### I. Milestone 1

- A. Login system for patients.
- B. Login system for doctors.
- C. Rating system for the doctors.

### II. Milestone 2

- A. Medical Questions by the patients.
- B. Answers by the doctors.

### III. Milestone 3

- A. Likes and dislikes by the users.
- B. Search on previous questions.
